**2. Citations and explanations (Rule 70.7)****Claims 1-5**

Irradiating pulp with ultraviolet and/or visible light in the presence of at least one compound selected from a group consisting of reducing agents, peroxides and organic compounds capable of producing hydrogen is described in the following documents. For example, document 1 (paragraph [0007]) describes that the invention can be applied to all pulps including mechanical pulp, chemical pulp and waste paper pulp. So, even if the kind of pulp is specified, the invention of the present application is not different from the inventions described in the following documents. These documents do not particularly describe color resistance, but agree with the invention of the present application in the treatment for the pulp.

Therefore, the subject matters of claims 1-5 do not appear to be novel.
